## CONTROLLER FLIGHTBAG S

The Zomo FlightBag Controller S is a successful combination of DJ-Bag and Flightcase. It is suitable for various controllers and offers optimum protection and generous equipment. A very stable metal frame provides sufficient protection for the packed controllers and ensures that the bag always stays in shape and guarantees a long service life. The foam inserts supplied make it easy and safe to store even smaller controllers. Thanks to the integrated Velcro fasteners, the foam can be attached to the sides of the flight bag and thus ensures perfectly padded and safe transport of your controller. The practical advantages of a bag such as a comfortable shoulder strap that can be adjusted in length or the additional outside pockets, which offer plenty of space for all kinds of accessories (such as mobile phones, chargers, etc.), are perfectly combined with the stability of a flight bag. Zomo FlightBags are an optimal addition to your valuable equipment and always ensure a successful appearance. Your controller is safely embedded in the Zomo FlightBag S and protected from damage and scratches by the first-class inner lining.
