ZOMO FLIGHTCASE SET-30A9X NSE

0030103553

Zomo has developed the **Flightcase Set-30A9X NSE**, a robust transport solution specifically designed for two Alphatheta CDJ-3000X and one Pioneer DJ DJM-A9. This case not only provides optimal protection but also impresses with its well-thought-out functionality and the striking design of the **Night Style Edition (NSE)**. The deep black finish gives the housing an elegant look that blends harmoniously into any professional setup.

The construction made of **laminated 9 mm plywood** ensures exceptional stability and durability. Even heavy-duty use or cigarette embers cannot harm the housing. **Black-painted aluminum profiles** and **reinforced ball corners** reliably protect against impacts and shocks – ideal for demanding touring use. Inside, a **high-quality padding** ensures that your players and mixer stay firmly in place without scratches or damage.

The practical handling is also evident: thanks to **integrated wheels**, the set can be transported effortlessly, while sturdy **butterfly latches** provide a secure hold and quick opening. The lid can be completely removed if needed, so you can start working directly with your setup. A cleverly integrated **cable channel** also ensures neat cable management – especially useful for live gigs or quick setups.

With this NSE version, Zomo focuses not only on functionality but also on a modern and consistent appearance. The result is a **flightcase** that impresses equally in terms of protection, design, and handling, reliably accompanying your equipment – whether in the studio, the club, or on tour.
