

DHW009

SMALL THIMBLE SLIDE

The Thimble Slide is a new kind of guitar slide. Developed and patented by rock guitarist Cole Coleman, the Thimble Slide is designed to be worn on the tip of your finger. Yet, it allows your fingertip to pass through and exposes enough of it so that you can easily fret your instrument – while wearing the slide! You can play linear parts, chords, riffs AND take that slide solo and go back to playing chords without a pause in the same song! You can easily develop mixed solos and parts sliding and fretting. The Thimble Slide is particularly useful to guitarists who will use it for slide solos and melodies.
