HUSH-I MPL

PORTABLE ACOUSTIC GUITAR - MAPLE

HIGHLIGHTS

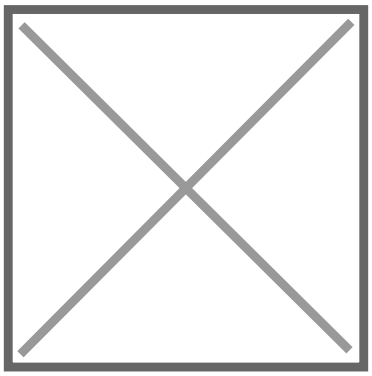

SMALL BODY, BIG RESONANCE

Although HUSH-I is as light as a laptop, its original wood body pickups greatly produce the resonance with a warm and full sound.

HEADLESS DESIGN AND BOTTOM TUNERS

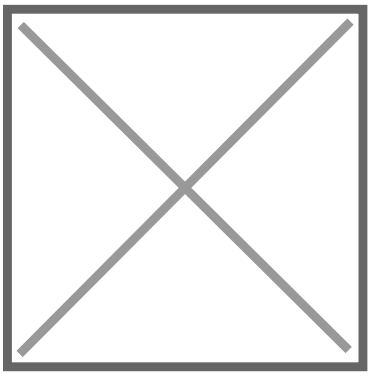

The traditional headstock is easily hit by accident, resulting in out-of-tune or even damage. And of course it increases instrument size: HUSH-I headless design is the answer. The tuning machines have therefore been moved to the lower part of the body, minimizing the chances of the guitar losing its tuning.

REMOVABLE UPPER AND LOWER FRAMES

You can still install the ergonomic upper and lower frames to convert HUSH-I into a traditionally shaped guitar, allowing you to switch between different usage scenarios freely.

ASYMMETRICAL GUITAR NECK

The asymmetrical guitar neck of HUSH-I can satisfy both beginners and guitar virtuosos. The gradual neck curvature helps players to perform better in higher and lower neck position. Furthermore, it helps reduce wrist fatigue even with long practice hours.

BUILT-IN PREAMP

With the 2-stage EQ and Volume knobs, you can fine-tune your desired tone any way you want.

PLUG AND PLAY WITH LONG BATTERY LIFE

HUSH-I is equipped with a headphone output, MP3 output, and 6.35 mm jack output allowing you to perform on stage or practice quietly at home. The pickup has a built-in lithium battery providing 50 hours of usage with earphones or one month with guitar amplifier. The ultra-long-lasting battery life means you don't have to worry about running out of battery during the performance.

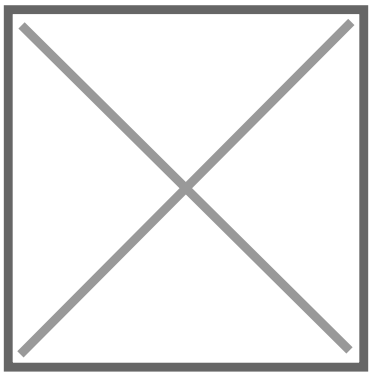

PHASE BUTTON

Acoustic guitars are prone to feedback due to the excessive gain of external equipment (large speakers or PA systems), the anti-phase button on HUSH-I inverts the output signal by 180 degrees, eliminating feedback and allowing the guitar to purer sound.

2 IN 1 GUITAR STRAP

HUSH-I comes with a 2 in 1 guitar strap that works on both guitar and bag. The quick release buckle keeps the strap from falling off.
