SPEEDMAT SET

The Zomo Speedmat is the ultimative tool for all DJs which would like to fire extremely fast scratch moves, back spins and juggles. The Speedmat is made of special material Polyvinyl (PVA) . The thin but handy surface reduces the contact to the turntable plate once again what causes that you can move faster with less energy expenditure - without losing control. If you use the Zomo Speedmat as the only layer between the turntable and the Vinyl, it’s very handy. Classically the foil is put as a second layer under the normal slipmat, in order to reduce the friction and make fastest moves possible. The Zomo Speedmats is supplied as a double pack, in order to be able to equip a complete DJ-set in one step. 2 pieces = 1 price! Of course the Speedmat is antistatic and impresses by the legendary animated 3D Design, which particularly shows the effect under influence of a strobe effect.
