

MIGHTY AIR

WIRELESS STEREO MODELING GUITAR/BASS AMP WITH BLUETOOTH (10W)

NUX Mighty Air is a wireless stereo modeling guitar bass amplifier with Bluetooth connectivity and a dedicated app that can enhance your tone from your Android and iOS devices. It can serve you for bedroom practice, pre-show warming up, travel entertainment and more. NUX Mighty Air sets the new standard for practice amplifiers with its complete wireless versatility. The included transmitter and onboard receiver wireless system can work well with any guitar/bass, active pickups or passive pickups. It's time to wave goodbye to the AA-size batteries, a high-performance rechargeable battery is built into this amplifier that can provide up to 18 hours of continuous playing time on a single charge. To design an amplifier that can work perfectly with both Guitars and Basses, our R&D team has created a unique speaker system by using 2" custom speakers with a passive bass radiator. Guitar mode is loaded with 4 channels: Clean, Overdrive, Distortion and Acoustic Simulator, while Bass mode has 3 channels: Pop, Rock and Funk. Don't be fooled by its control panel, there are loads of preamp models and cabinet IRS and effects available with our Mighty AMP app. And the best part is that you can save all the changes you made to a channel for further use. The NUX Mighty Air's Bluetooth can do more than just audio playback, it also comes with 9 built-in EQ presets that you can be handy in some cases. Let's say that if you want to play along with a new song and you cannot find its backing track, use preset Guitar Cut will eliminate the guitar signal automatically.
