

SFFD05L

FAST DISSIPATING SMOKE FLUID

CENTOLIGHT SFFD05L Fast Dissipating Fluid is a water-based smoke fluid suitable for all types of smoke machines equipped with a heater block. Its special formulation is designed to provide a well visible smoke soon after it is emitted, but of rapid dispersion after a few seconds. Its stability is good but not very durable. It is a product suitable to create smoke effects that have a good initial persistence, but which require a quick dissipation. The pale green color is pleasant and leaves no traces of any kind on clothes or surfaces while the smoke is white. The scent is neutral and pleasant, and leaves no trace after the dissipation. You can also add one of the many CENTOLIGHT fragrances to recreate atmospheres that can range from tropical fruits, flowers and fragrant plants. The SFFD05L is made according to strict production processes and strict controls during all its phases, and meets all the European regulatory requirements. It is available in 5L tanks.
