

VV3

VV-3 PORTABLE PIEZO PICKUP FOR VIOLIN AND VIOLA

VV-3 violin pickup offers clean and clear acoustic sound with easy installation without modification to the instrument. The lightweight low-profile ebony jack housing makes the unit ideal for a performing musician.

VV3

A passive piezo sensor installs at the bridge, much like an electric violin. Secure the output jack to the lower bout of the instrument and you're ready for any live or studio performance.

In addition to being a violin piezo pickup, VV-3 works just as well for lower frequencies as a viola pickup.

PRODUCT DETAILS
