

DB-1

DB-1 PORTABLE PIEZO PICKUP FOR DOUBLE BASS

DB-1 faithfully reproduces the breadth of tone and dynamic range of your instrument without modification.

DB-1

A wood-encased piezo sensor installs in eye slot of the bridge, held in place via friction. Neatly-finished shim discs ensure the perfect fit. The 1/4" jack housing secures non-destructively to the tailpiece with a screw assembly at the string eye.

DB-1 is entirely passive, designed to work flawlessly with your favorite amplifier or colored via a preamp of choice.
