## HIGHLIGHTS

### CHORD CRUISER MODE: EASILY MAKE UNIQUE CHORD PROGRESSIONS

Chordcat can suggest up to 110,000 chord combinations\*1 which you can use to create your own progressions. Put the groovebox in Chord Cruiser mode, and an exclusive algorithm selects and suggests multiple musically compatible chords from its database. You can listen to these chords and assign your favorite to the keyboard, triggering the next suggestion automatically. With this intuitive workflow at your fingertips, you can enjoy a simple process for making original tracks. Chordcat also includes 18 preset chord progressions called Chordsets, 13 of which are inspired by various musical genres, such as house and future bass, while the remaining 5 are basic chord presets, such as major and minor. You can use these presets as they are, or as a starting point to spark your own ideas. From there, Chord Cruiser mode gives you the freedom to create entirely unique chord progressions.
