HAMMERTONE™ BOOST

A true double feature, the Hammertone® Boost pushes your signal to new levels with two distinct flavors of boost in one enclosure. Use the Type switch to select between a pristine, clean opamp boost circuit designed for colorless volume boosting and a JFET based boost that fattens your signal with a taste of harmonically rich compression characteristic of preamps in vintage tape units. Easily attain a completely flat boost thanks to the center detents on the Treble and Bass controls or adjust each knob to your liking – boosting and cutting frequencies as you see fit. This all-in-one boost pedal is capable of solo boosting with no added coloration, pushing your amp into breakup, sweetening your core tone, and so much more.

HAMMERTONE™ BOOST

PRODUCT DETAILS

KEY FEATURES

- Selectable ultra-clean opamp or harmonically rich JFET boost circuits
- Active 2-band Bass and Treble EQ controls for further tonal shaping
- Bass and Treble controls feature center detents indicating flat frequency response
- Soft-touch relay true bypass with auto bypass when no power is present
- Top mounted jacks and road-ready aluminum enclosure
- Powered by 9-Volt Battery or Center Negative AC Adaptor, Not Included
- Material: Aluminum
- Color: Gray with White Accents

SPECIFICATIONS

Input Impedance	1M Ohm
Output Impedance	470 ohm
Power Consumption	85mA
Power Requirements	9-Volt Battery or Center Negative AC Adaptor (Not Included)
Dimensions (WxHxD)	56x112x62 mm
