HAMMERTONE™ BREAKUP DRIVE

Dial in responsive, tube-like drive tones with the Hammertone® Breakup Drive. The perfect contender for an always-on pedal, this JFET based overdrive is designed with one focus in mind: replicating the dynamic response of hot tubes right at the edge of saturation. Two selectable clipping modes tailor the drive's character between light breakup and medium-gain overdrive, each supplying an expressive response that cleans up with lighter picking and breaks up more the harder you strum. An expansive tone control and switchable pre-gain mid boost provide powerful frequency shaping tools to hone your final tone. From flavoring your core clean tone to delivering dynamic overdrive on tap, the Hammertone Breakup Drive has you covered.

HAMMERTONE™ BREAKUP DRIVE

PRODUCT DETAILS

KEY FEATURES

- Two selectable JFET based dynamic clipping stages
- Interactive tone control provides a wide range of EQ flavors
- Mids switch selects between flat response and pre-drive mid boost
- Soft-touch relay true bypass with auto bypass when no power is present
- Top mounted jacks and road-ready aluminum enclosure
- Powered by 9-Volt Battery or Center Negative AC Adaptor, Not Included
- Material: Aluminum
- Color: Gray with Royal Blue Accents

SPECIFICATIONS

Input Impedance	1M Ohm
Output Impedance	470 ohm
Power Consumption	85mA
Power Requirements	9-Volt Battery or 9VDC Center Negative AC Adapter (not included)
Dimensions (WxHxD)	56x112x62 mm
