

MK300

ARRANGER KEYBOARD WITH 61 TOUCH-SENSITIVE KEYS

MK300

The MK300 arranger keyboard was developed to meet the need of beginners who want an electronic keyboard with a large number of built-in sounds and styles.

To meet this need, the MK300 keyboard is equipped with 633 preset sounds and 220 preset styles, allowing you to enjoy playing various musical genres.

This keyboard is also suitable for music enthusiasts and keyboard players who want a lightweight, battery-powered touch-response keyboard which they can take outdoors so they can play and create music anytime, anywhere.

The MK300 is equipped with a backlit LCD display that clearly shows the functions and parameters in any lighting conditions.

The number buttons and Data Dial allow you to intuitively control parameters quickly, and the pitch bend wheel provides easy and smooth tone changes for sounds such as guitar, violin, and saxophone.

A 128-note polyphony allows you to play all the notes even when multiple parts and automatic accompaniment are active at the same time.

The ultra-compact design makes it lightweight for easy portability.
