ZOMO FLIGHTCASE SET-3010X NSE

0030103554

Rugged protection, thoughtful design, and practical equipment – the **Zomo Flightcase Set-3010X NSE** has been specially designed for two Alphatheta CDJ-3000X units and a Pioneer DJ DJM-V10 or DJM-V10LF. It offers a perfectly fitting solution for professional DJs who want to transport their valuable equipment safely and comfortably. The striking deep-black finish of the **Night Style Edition (NSE)** not only provides an elegant look but also a durable surface that withstands even intensive use.

The case is made of **laminated 9 mm plywood**, ensuring exceptional stability. Black-coated aluminum profiles and reinforced ball corners reliably protect against shocks and damage, which are unavoidable in everyday touring. Inside, the case impresses with a **precisely fitted padding** that securely holds your devices and prevents scratches. This way, your setup remains in perfect condition even after frequent transport.

The Zomo Flightcase also demonstrates great practicality in handling. Thanks to the **integrated transport wheels**, you can easily move the case, while sturdy butterfly latches ensure a secure hold. The lid can be completely removed if needed – ideal when you want to work directly from the case. Especially useful is the **built-in cable channel**, which provides clean cable management and makes setup much easier.

With the NSE version, Zomo combines functionality and design in an impressive way. The matte black finish fits perfectly into professional environments and gives your setup a uniform, high-quality appearance. If you value reliability, protection, and a professional look, the Set-3010X NSE is a durable transport solution that leaves nothing to be desired.
