TELEPATH® WIRELESS TRANSMITTER

Expand your existing Telepath® Wireless System with this add-on Telepath Transmitter. Each Telepath Receiver can be synced with up to three transmitters for quick, cable-free instrument changes – just turn off one transmitter and turn on the next to automatically connect a new instrument to your rig.

The Telepath Wireless System delivers full-frequency wireless audio with sparkling clarity across any stage. Offering uncompromised tone and reduced interference from other devices, the Telepath transmits signal across the 5.8GHz frequency band - avoiding the overcrowded 2.4 GHz bandwidth used by most wireless devices.

The Telepath Transmitter features an articulating input plug to fit a wide variety of instrument jacks and an active/passive switch to accommodate the output signal of guitars, basses, acoustic-electrics, active instruments, and more. Built in cable tone simulation maintains the natural feel of your instrument and multi-unit syncing means you can pair this transmitter to your existing receiver in seconds. Enjoy up to 70 feet of wireless freedom with low latency and unparalleled signal strength.
