

M581016P

HIGH GRADE 10 HOLE DIATONIC HARMONICA

M581016P

Hohner Meisterklasse diatonic harmonicas represent the highest quality level of the MS Series range. They offer a beautiful aesthetic design, a comfortable ergonomic shape, and above all, outstanding sound quality. Thanks to their extra-thick 1.05 mm reed plates, they deliver high volume and maximum dynamic range. At the same time, they produce a clean, bright tone and an extremely fast response across the entire tonal range. Their body is made of anodized aluminum, while the reed plates and covers are made of brass. All Meisterklasse harmonicas feature the popular Richter tuning system and offer a range of three octaves.

The **MS** designation in the MS Series stands for **Modular System**, meaning that the comb, reeds, and covers are compatible with other models in the same series. This allows players to combine different materials, replace components, and experiment to find the configuration that best suits their preferences and playing
