

C-6B

RESOPHONIC GUITAR CAPOS, C-6 ORIGINAL SERIES

Shubb capo is BY FAR the best at not creating tuning problems. Its soft, resilient rubber is specially designed to work just like a fingertip, so it doesn't bend the strings over the frets. Its closing action is just like your hand, so it doesn't pull the string off center. As a result, no re-tuning is necessary! Unlike other Dobro capos that attach only to the strings, the Shubb clamps solidly to the neck to provide great tone. It uses the same patented locking action of our Shubb guitar capo, and it aligns by touching the fret, not by eye, making it fast and accurate. This is the best capo ever put on a resophonic guitar.

PRODUCT DETAILS

KEY FEATURES

Polished Bronze

Rounded Ends: softer to the touch

Contoured level: easier to use

Roller design: smoother action, superior geometry, reduced wear

It is NOT for use on Weissenborn style guitars with hollow necks, because their necks are too deep and too fragile
