

NDL-5 DUAL SWITCH LOOPER PEDAL

JTC Pro is an advanced pedal with simplified controls. It's a dual switch stomp box with 6 hours of recording capability and 256 loop track memories. It has independent controls for the looper and the drum: left footswitch (LOOP) controls recording, overdub, and start/stop of the looper. This switch also features NUX patented Smart TAP function, which automatically detects whether you want to control the looper or to set the tempo of the drum.
