EXPRESSO

EXPRESSION CONTROL PEDAL FOR BEATBUDDY 2 AND AEROS

EXPRESSO

The Singular Sound **Xpresso** Expression Controller Pedal is designed for musicians who need **hands-free control over their sound** during live performances, rehearsals, and studio sessions. Translating your foot movements into precise, real-time adjustments, it lets you change important settings without taking your hands away from your instrument. Its **dedicated EXP** output works with devices featuring an expression input, making it a useful addition to a range of setups.

If you're using the **BeatBuddy 2**, the Xpresso gives you **direct control over tempo, velocity, and volume**. This means you can adjust the pace and dynamics of your backing rhythms while you play. For **Aeros** users, it offers control over **individual track levels, input levels, overall volume, and loop decay.** You can balance different parts of your performance and manage how your loops fade, all with simple foot movements.

Two stereo audio inputs and outputs give you more flexibility when routing audio through your setup. **Stereo TRS mode** lets you connect and control stereo sources directly, including the BeatBuddy 2's headphone output. Alternatively, **dual mono mode** allows separate control of left and right channels, making it suitable for the BeatBuddy 2's main output. And there's no need to worry about finding another power socket, as the Xpresso operates passively **without an external power supply**. Its lightweight, all-metal construction also provides the durability needed for regular use on stage and in the studio.
