HDJ-C5

PROFESSIONAL WIRED DJ MONITORING HEADPHONES (GREY COLOR)

HDJ-C5

DJs need a lot from their headphones: excellent durability, loud and accurate sound reproduction for precise music monitoring, and high-quality sound with zero audio delay. While wireless monitoring is growing in popularity, many DJs still prefer the rock-solid reliability and plug-and-play simplicity of a traditional wired connection—without having to worry about battery life or wireless setup.

To deliver professional-grade monitoring to a wider range of DJs at a more accessible price point, AlphaTheta developed the **HDJ-C5**. Designed specifically for DJs who prefer a wired-only connection, the HDJ-C5 focuses on the essentials that matter most in the booth: clear, punchy sound reproduction, effective sound isolation, and rugged durability built to withstand intense performances. And, if you ever want the freedom of ultra-low-latency wireless monitoring via SonicLink or everyday Bluetooth® listening, the **HDJ-F5** also joins the range—offering wireless flexibility while sharing the exact same acoustic performance, isolation, and build quality as the HDJ-C5.

HIGHLIGHTS

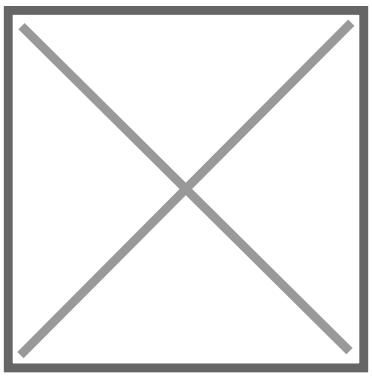

HIGH-QUALITY DESIGN

The HDJ-C5 is a wired model that shares the same sound quality, sound isolation, and durability as the HDJ-F5. By focusing on the essential performance DJs need – without wireless connectivity, status indicator, or the dedicated app – this model comes at an accessible price, even for those just starting out.

DARK GRAY COLOR

This simpler model is available in a single dark gray color that fits with a variety of AlphaTheta DJ setups.
