

NOD-3 MORNING STAR MINI CORE OVERDRIVE

The Morning Star lights up all of the classic aspects of a great blues breaker pedal, but we added something stellar to improve the high-frequencies. Engage the Morning Star footswitch to add more overhead with saturated grit to your clean tones, and if you wanna boost your high-frequencies to a whole other stratosphere, press/hold the footswitch to activate the Shine circuit which adds a whole new level of tone brightness. You also get 2 bypass options: True Bypass or Buffer Bypass for your essential signal chain needs.

NOD-3 MORNING STAR MINI CORE OVERDRIVE

PRODUCT DETAILS
