250K NO-LOAD SPLIT SHAFT POTENTIOMETER (VOL. OR TONE)

An integral part of the Delta Tone™ system used on Fender® American Series electric guitars, the "No-Load" potentiometer functions as a normal tone control from 1 to 9. At 10, however, the tone control is taken out of the circuit for increased output and overall tonal response. The 250K is usually associated with most single-coil pickups.

3/8" potentiometer shaft. Split shaft design. Works with push-on style knobs (no set screw).

Fits nearly all Fender instruments (U.S. and Mexico) requiring a split-shaft potentiometer.

PRODUCT DETAILS

KEY FEATURES

250K "no-load" potentiometer

3/8" split-shaft design

Takes push-on control knob

Mounting hardware and .022mf 250V tone capacitor included

Orientation: Right-Hand

Style: Modern
