

HDJ-S7-W PROFESSIONAL ON-EAR DJ HEADPHONES (WHITE)

Monitor mixes in comfort for long periods of time with the higher-quality audio, advanced durability and improved fit of the HDJ-S7 headphones. Thanks to a high definition 40-mm driver, they'll deliver the same high-resolution 5kHz to 40kHz sound as our flagship HDJ-X10 over-ear headphones. Ideal for DJ monitoring, you'll pick up on greater separation of rich bass tones and clear mid-to-high frequencies. The HDJ-S7 model headphones were designed together with input from highly respected international DJs. As a result, they're flexible with smaller on-ear cans, an adjustable headband and swivel which you can fix at 45 degrees, allowing you to wear them comfortably, whichever way you prefer. Built to last, they've been rigorously tested to ensure they stay with you in the booth, time after time.

HDJ-S7-W

PROFESSIONAL ON-EAR DJ HEADPHONES (WHITE)
